

CRANIAL PLATING

When it comes to cranial surgery, healing isn't just about recovery - it's about restoring protection, dignity, and quality of life. Patients may never see the plates used in their procedure, but they'll feel the impact every day. That's why cranial fixation systems need to do more than hold - they need to heal.

Low Profile, High Performance

Plates are **0.3 mm–0.6 mm thick**, offering a balance between contourability and strength. Titanium-grade construction ensures biocompatibility, corrosion resistance, and reliable long-term fixation.

Versatile Plate & Screw Options

Kit includes:

- L, T, Y, H, Orbital Rim, and Straight Plates
- Compatible with Ø1.5 mm & Ø2.0 mm self-tapping screws
- Screw lengths from 4 mm to 14 mm
- Colour-coded plate and screw system for easy identification

Complete Surgical Set

Includes ergonomic instruments, depth gauge, screwdriver, and bending tools. All components housed in a sterilisable tray, ready for theatre. Designed for efficiency, repeatability, and reduced downtime between cases.
